

ABSTRACT

The present invention is directed to a container 10 for fluids, including cleansers, emulsifiers and other liquids, wherein the container 10 provides an after use as inflatable toys, decorative accessories, and so forth. Further, the container 10 is readily and economically manufactured, shipped and stored. In one embodiment of the present invention, a container 10 includes a flexible member 12 forming a chamber 16 therein, the flexible member 12 having a modulus of elasticity conducive to liquid containment and gaseous inflation of the flexible member 16; and means for selective flow restriction 14, such that the container 10 is capable of repetitive use for both liquid containment and gaseous inflation.
